14 UNITED STATES OF AMERICA,)	CASE NO. CR 14-00030 JST
)	
15 Plaintiff,)	DECLARATION OF THOMAS R. GREEN IN
)	SUPPORT OF GOVERNMENT'S OPPOSITION
16 v.)	DEFENDANT'S MOTION FOR A REDUCTION IN
)	SENTENCE
17 MARCUS BELTON,)	
)	
18 Defendant.)	
)	
19 _____)	

20
21 I, Thomas R. Green, declare as follows:

22 1. I am an Assistant United States Attorney for the Northern District of California and the
23 attorney assigned to represent the government in the above-captioned case.

24 2. Exhibit A of this declaration comprises true and correct copies of Defendant Marcus
25 Belton's medical records created during his time of incarceration at USP Lompoc in this case, which I
26 obtained from BOP counsel. Aside from redactions related to defendant's personal identifying
27 information, the records are being filed in the public record based on defendant's authorizing me to do
28

1 so, and because much of the records relate to defendant's health conditions that bear on his motion for
2 early release.

3 3. Exhibit B of this declaration is an email BOP counsel Eric Hammonds sent to me on
4 October 15, 2020, regarding his efforts to ascertain whether Mr. Belton had been told he would be
5 "written up" or be disciplined for seeking medical care related to COVID-19 symptoms.
6

7 I declare under penalty of perjury and the laws of the United States that the foregoing is true and
8 correct to the best of my knowledge.
9

10 Dated: October 16, 2020

Respectfully submitted,

11
12 /s/ Thomas R. Green

Admin Note - Medication Reconciliation encounter performed at Health Services.

Administrative Notes:

ADMINISTRATIVE NOTE 1 Provider: Watson, William MD

IM requests all meds PLO.

These were written for already, 2 days ago, except GLIP: see below.

IM informed of his need to take GLIP with meals twice daily, as per discussion with Pharmacist.

Occasion taken also to review his Diabetic Diet: IM is required to reduce simple Carbs, and starches. Diet reviewed in detail. IM voices understanding.

See separate encounter for new Rx, which IM agrees to addition of and BG's at Pill Line, on account of recent rise in HgA1c.

ASSESSMENT:

Pain - Chest

This is a 49 yo BMA pt. that presented to HSU with a complaint of CP and SOB, upon laying down. The pt. ambulates with the assistance of a walker. The pt. presented in no apparent distress/pain, A&Ox4, GCS of 15. The pt. reports that this is an ongoing issue for the past two months. Frequent and persistent CP when laying down, with associated SOB believed to stem from a coughing fit. "My chest does not hurt right now, and I have no respiratory issues at the moment. When I lay down at night or to rest, is when CP and SOB are worsened. The CP is on the L. side of my torso, it moves to different places on the L. side. I cough and it leads to feeling SOB."

The pt. denied headache, dizziness, light headed, nausea/vomiting, diarrhea, fever, chills, night sweats, current loss of

EMT/Para - Evaluation encounter performed at Health Services.

SUBJECTIVE:

COMPLAINT 1 **Provider:** Fabie, Shane E EMT-P

Chief Complaint: Nausea/Vomiting

Subjective: Called to F unit for ill subject. Arrived to find a 48 year old male in mild distress, A&O X 4 with a GCS 15. Patient complains of body aches and vomiting. Patient reports this started earlier today and was only able to eat breakfast. Patient also reports he has not been able drink water.

Patient denies any CP, SOB, diarrhea or dizziness. Patient is A-febrile.

Cranial nerves are grossly intact, no focal neurological weakness noted, heart rate and rhythm are regular, no JVD or pedal edema noted.

On duty medical officer, discussed case with Dr. Soufer in detail. VO to give patient 25mg of promethazine. Also to follow up with patient tomorrow morning.

PATIENT SYMPTOMATIC? (75325-1)	NOT GIVEN	FINAL
SOURCE: (31208-2)	NOT GIVEN	FINAL
▲ SARS CoV 2 RNA, RT PCR (94500-6)	DETECTED	FINAL

REFERENCE RANGE: NOT DETECTED

This test is intended to be performed on respiratory specimens collected from individuals who meet Centers for Disease Control and Prevention (CDC) clinical and/or epidemiological criteria for COVID-19 testing. CDC COVID-19 criteria for testing on human specimens are available at CDC's webpage Information for Healthcare Professionals: Coronavirus Disease 2019(COVID-19) <https://www.cdc.gov/coronavirus/2019-ncov/hcp/index.html>.

A Detected result is considered a positive test result for COVID-19. This indicates that RNA from SARSCoV-2 (formerly 2019-nCoV) was detected, and the patient is considered infected with the virus and presumed to be contagious. If requested by public health authorities, specimens will be sent for additional testing.

An Inconclusive result means not all of the testing targets were detected, additional sample collection may be considered. A Not Detected (negative) test result for this test means that SARS-CoV-2 RNA was not present in the specimen above the limit of detection.

A negative result does not rule out the possibility of COVID-19 and should not be used as the sole basis for treatment or patient management decisions. If COVID-19 is still suspected, based on exposure history together with other clinical findings, re-testing should be considered in consultation with public health authorities. Laboratory test results should always be considered in the context of clinical observations and epidemiological data in making a final diagnosis and patient management decisions.

Due to the current public health emergency, Quest Diagnostics is receiving a high volume of samples from a wide variety of swabs and media for COVID-19 testing. In order to serve patients during this public health crisis, samples from appropriate clinical sources are being tested. Negative test results derived from specimens received in non-commercially manufactured viral collection and transport media, or in media and sample collection kits not yet authorized by FDA for COVID-19 testing should be cautiously evaluated and the patient potentially subjected to extra precautions such as additional clinical monitoring, including collection of an additional specimen.

This test has been authorized by the FDA under an Emergency Use Authorization (EUA) for use by authorized laboratories.

Please review the "Fact Sheets" for health care providers, and patients and the FDA authorized labeling available on the Quest website: www.QuestDiagnostics.com/Covid19

PROGRESS NOTE

Physician: Lawrence Riemer, MD

Date of Progress Note:

Problem:
COVID-19 suspected.

Subjective:
Diarrhea is a major problem. Some fatigue, shortness of breath, going to bathroom, taking off oxygen.

Objective:
Temperature 99, heart rate 82, O2 saturation 2 L, decreased to 1 L, 96 by nasal cannula, blood pressure 139/72. WBC 9.8, hemoglobin 13.1, D-dimer only 348. Therefore, we will not give Lovenox per March 11th lancet article from Chinese Cardiology experience. Sodium 136, potassium 3.8, chloride 97, CO2 of 26, anion gap 12, BUN 19, creatinine 1.0, glucose 259, magnesium 2.3. Cholesterol 97, triglycerides 112, HDL 27, LDL however on atorvastatin only 50. Hemoglobin A1c 11.9, poor long-term control. Urine specific gravity 1.028 this morning. Therefore, hemoconcentrated. Sputum Gram stain, 4+ epithelial. No bacterial growth yet. Many gram-positive cocci, gram-positive bacilli, moderate gram-negative bacilli, a few gram negative diplococci.

Plan:
A 1000 mL normal saline.

HISTORY AND PHYSICAL EXAM

Physician: Lawrence Riemer, MD

History Of Present Illness:

The patient is a 48-year-old black male, USP inmate with hypertension, diabetes, who presented with one week of fever, cough, diarrhea, some nausea after exposure to COVID-19. He has a poor appetite. He was treated with albuterol with a little benefit. He had hypoxia with an O2 saturation of 84% prior to transfer from the prison. He was admitted to my service, diabetes said to be diet controlled.

Past Medical History:

Ankle problem with a gunshot wound to the left ankle. Prison says he has a history of noncompliance with medical treatment, also low back pain, unspecified disorder of patella, has had a nonspecific chest pain, said to have an adjustment disorder, radiculopathy, stage II kidney disease. He has had some dizziness and giddiness and spine disease, _degenerative disc.

Past medical history as above. Mental problems noted.

Medications:

Amlodipine 10 mg a day, Tylenol, albuterol inhaler HFA without benefit, aspirin 81 mg a day, atorvastatin 20 mg a day, doxazosin 1 mg at night, lisinopril 20 mg a day, metformin 500 mg b.i.d.

Physical Examination:

Revealed a man without severe shortness of breath, but with some temperature to 101.2 April 7th at 19:35, respirations 20 on 3 L of oxygen, O2 saturation 98%, blood pressure 145/94. Height 5 feet 6 inches, weight 188.3 kg. HEENT: Eyes, without icterus. Nose, not congested. Hearing good. Has nasal cannula.
Lungs: With diffuse decreased breath sounds of moderate severity.
Heart: Regular without murmur or extra sound.
Neck: No neck vein distention. Carotid without bruits.

MRN: 310103 Visit: 2330505 Age: 48y	BELTON, MARCUS Gender: Male	Lompoc Valley Medical Center Current Location: MS 202 MS
---	--------------------------------	---

Abdomen: Only slightly tender.

Laboratory Data:

Chest x-ray, a mildly hazy infiltrate suspected in the peripheral aspects of both lower lungs primarily on the left. Suggestive to me of COVID-19.

WBC 12.9, hemoglobin 14.1, sodium 134, potassium 3.6, chloride 92, CO2 of 22, anion gap 24, BUN 21, creatinine 1.2, GFR over 60, glucose however 281, consistent with poor control of diabetes. Calcium 8.8, albumin 3.6, bilirubin 0.9, alkaline phosphatase 64, ALT 20, AST 29, total protein 7.4. Urinalysis ordered.

Assessment:

1. Gunshot wound area of ankle.
2. Vertebral disc disease with sciatica.
3. Hyperlipidemia.
4. Type 2 diabetes.
5. Shortness of breath and cough consistent with COVID-19.

PROGRESS NOTE

Physician: Lawrence Riemer, MD

Date of Progress Note:

Problem #1:

The patient is a 48-year-old man with COVID-19 suspicion. No report back on chart to confirm this. He feels more short of breath today than he has previously. Some soreness of chest and fever. Ice packs being used. Chest x-ray was from 04/07/2020 showing hazy infiltrate suspicious for viral pneumonia. The patient on Zithromax and hydroxychloroquine currently 400 mg b.i.d., but is being decreased per standard dosage to 200 mg b.i.d. and Zithromax to be given p.o. because of an IV Zithromax shortage. This should be adequately effective. Temperature is 100.6, respirations 22, O2 saturation is 99% on 2 L nasal cannula.

Problem #2:
Diabetes.

Subjective:
On Lantus 10 b.i.d.

Objective:
Blood sugar was 253 at 2215 yesterday.

Plan:
I will decide on dosage of insulin tomorrow after morning blood tests. Also we will get D-dimer to see if Lovenox indicated.

PROGRESS NOTE

Physician: Lawrence Riemer, MD

Date of Progress Note: 04/10/2020

Problem:
COVID-19 presumed.

Subjective:
The patient says that breathing is better than yesterday. Appetite is good and taking in oral foods.

Objective:
Temperature 99.1 on 04/09/2020, at 1558 hours. Temperature is 100.6, heart rate 73, respirations 18, O2 saturation 93% on 2 L, and blood pressure 129/88.

On 04/10/2020, pH 7.451 and pCO2 of 40.2. WBC 6 and hemoglobin 13. D-dimer went from 348 on 04/08/2020, to 2440 today. Potassium at its high was 3.8, now 3.3. Glucose 126. C-reactive protein 5.8. Gram stain normal.

Assessment:
Potassium somewhat low, although x-ray looks worse than it did on 04/07/2020. He feels breathing is better than yesterday. An oxygen requirement is low. Needs anticoagulation with elevated D-dimer.

Plan:
Lovenox 40 mg. We will have him take K-Dur 20 mEq b.i.d. Recheck electrolytes tomorrow.

PROGRESS NOTE

Physician: Lawrence Riemer, MD

Date of Progress Note: 04/11/2020

Problem:
COVID-19 infection.

Subjective:
The patient is on 2 L oxygen, does not feel at all short of breath. Appetite is good. No diarrhea. Some left rib pain.

Objective:
Vital Signs: Temperature 99, heart rate 54, respirations 18, O2 saturation 94% on nasal cannula 2 L.

Laboratory Data:
D-dimer elevated at 2190. Today, C-reactive protein elevated at 4.6.
Platelets 363. PH 7.433, pCO2 of 41.9, pO2 of 53.2. Chest x-ray, worsening infiltrates.

Assessment:
In spite of chest x-ray and blood gas, he is clinically doing well.

Plan:
Continue Zithromax, hydrochloroquine and with high D-dimer, Lovenox. Sore rib area responded to Tylenol.

PROGRESS NOTE

Physician: Lawrence Riemer, MD

Date of Progress Note: 04/13/2020

Problem:
COVID-19.

Subjective:
Not having trouble breathing.

Objective:
Vital Signs: Last temperature 04/12 at 2200 of 99.8, on 2 L, respirations 20,
O2 saturation 94%, temperature 98.7, heart rate 70, respirations 18, O2
saturation 95%, blood pressure 114/71.

PH 7.438, pCO2 of 39, pO2 went up from 53.2 to 64.3.

Assessment:
The patient clinically improving.

Plan:
The patient has been here since 04/07, six days. He is on Zithromax 500 mg a
day, apparently, the hydroxychloroquine has had a full course and he is no
longer on it. We will get chest x-ray in the morning, perhaps try him on room
air only and assess if he is ready to return to prison. Get C-reactive
protein in the morning, BMP, and CBC.

07-Apr-2020 20:32	XR Chest 1 View Portable	1 or more Final Results Received
--------------------------	---------------------------------	---

HEART: Unenlarged.
 MEDIASTINUM AND HILA: Unremarkable.
 LUNGS: Mild hazy infiltrates suspected in the peripheral aspects of both lower lungs, primarily on the left.
 PLEURA: No effusions or pneumothorax.
 BONES: No significant findings.

CONCLUSION:
 Hazy infiltrates suspicious for viral infection. Correlate for Covid-19

Reason for Exam: covid 19 followup Clinical Indications: N/A
Transcriptionist:
Transcription Date: 04/10/2020

EXAM:
PORTABLE CHEST 1V - Time 0520 HRS

HISTORY:
Reason for Exam: covid 19 followup
Clinical Indications: N/A. Hazy infiltrates.

COMPARISON:
04/07/2020

FINDINGS:
HEART: Unenlarged.
MEDIASTINUM AND HILA: Unremarkable.
LUNGS: There appears to be slight increased density of mild to moderate bilateral hazy infiltrates.
PLEURA: No effusions or pneumothorax.
BONES: No significant findings.

COMPARISON:

04/11/2020

FINDINGS:

Improving bilateral airspace consolidation when compared the prior study of 04/11/2020. Heart mediastinum are within normal limits. There is metallic density superimposed over the right chest. Small metallic densities of the right shoulder.

CONCLUSION:

Measurable improvement of the asymmetric bilateral airspace consolidation when compared to prior imaging.

DISCHARGE SUMMARY

FCC LOMPOC

Physician: Lawrence Riemer, MD

Discharge Diagnoses:

1. Gunshot wound area of ankle.
2. Vertebral disk disease with sciatica.
3. Hyperlipidemia.
4. Type 2 diabetes.
5. COVID-19 with pneumonitis.
6. Diarrhea.

The patient is a 48-year-old black male, USP inmate with hypertension and hypertension list of diagnosis diabetes who presented with a week of fever, cough, diarrhea and some nausea after exposure to COVID-19. His appetite was poor. He was treated with albuterol with limited benefit. He had hypoxia with an O2 saturation of 84 prior to transfer from the prison. He was admitted to my service. Diabetes is said to be well controlled, but he was on metformin.

As in admission history and physical.

Physical Examination:

Vital Signs: Revealed a man without severe shortness of breath, but with some temperature to 101.1 on April 7th, respirations 20. He used 3 L of oxygen with an oxygen saturation of 98%, blood pressure 145/94, height 5 feet 6 inches, weight 188.3.

Eyes: Without icterus.

Nose: Not congested. Has nasal cannula.

Ears: Hearing good.

Lungs: With diffuse decreased breath sounds of moderate severity.

Heart: Regular without murmur or extra sound.

Neck: No neck vein distention. Carotid without bruit.

Abdomen: Only slightly tender.

Extremities: Without edema. Adequate peripheral pulses.

FCC LOMPOC

DISCHARGE SUMMARY

Laboratory Data:

Chest x-ray with hazy infiltrate suspicion for a viral infection on 04/07. X-ray 04/11, with increasing infiltrates. X-ray 04/14, with measurable improvement of the asymmetrical bilateral airspace consolidation when compared to prior images. EKG on the 7th, ventricular rate 77, cannot rule out old inferior wall MI. Lab on 04/07, WBC elevated at 12.9, hemoglobin 14.1, percentage neutrophils elevated at 90.2. Sodium 134, potassium 3.6, chloride 92, CO2 of 22, anion gap 24, BUN 21, creatinine 1.2, GFR over 60, glucose 281, calcium 8.2, albumin 3.6, bilirubin 0.9, alkaline phosphatase 64, ALT 20, AST 29, total protein 7.4. Blood cultures negative. Urinalysis; specific gravity 1.028 on the 8th, no evidence of urine infection. D-dimer elevated only to 348. On 04/08, WBC 9.8, magnesium 2.3. Cholesterol 97, triglycerides 112, HDL decreased 28, but total LDL good at 50, TSH 1.42, hemoglobin A1c, however, 11.9, therefore long-term control of diabetes is poor. Heavy growth of normal flora on the 8th. On the 10th, pH 7.451, pCO2 of 40.2, pO2 of 63.2. C-reactive protein 5.8, range 0 to 0.9. D-dimer on the 10th 2440 so Lovenox used. On the 11th, BUN 12, creatinine 1.1, magnesium 2.1, potassium 3.7. Platelet count 414 on the 12. C-reactive protein 3.9 on the 13th. Procalcitonin 0.181 on 2 L. on the 13th, pH 7.438, pCO2 of 39, PO2 of 64.3. On the 14th, WBC 5.5, hemoglobin 13.2. Potassium had jumped to 5.6 with supplemental potassium, C-reactive protein down to 2.6.

The patient's oxygen need developed where he did not need supplemental oxygen, so he is being discharged. I will discharge him on metformin 1000 mg b.i.d. instead of 500 mg because of high hemoglobin A1c. Imodium was used in the hospital, but will not be continued. He did have insulin subcu instead of metformin during his illness, Robitussin was used during hospitalization based. On kidney function, we will only use 10 mg lisinopril at discharge.

Activity:

As tolerated.

Diet:

Diabetic diet.

Medications:

Tylenol p.r.n. pain, lisinopril 10 mg a day, doxazosin 1 mg p.o. q.h.s., metformin 1000 mg p.o. b.i.d. increased dose from outpatient, amlodipine 10 mg a day, Zithromax and

PROGRESS NOTE

Physician: Lawrence Riemer, MD

Date of Progress Note:

Problem #1:

The patient is a 48-year-old man with COVID-19 suspicion. No report back on chart to confirm this. He feels more short of breath today than he has previously. Some soreness of chest and fever. Ice packs being used. Chest x-ray was from 04/07/2020 showing hazy infiltrate suspicious for viral pneumonia. The patient on Zithromax and hydroxychloroquine currently 400 mg b.i.d., but is being decreased per standard dosage to 200 mg b.i.d. and Zithromax to be given p.o. because of an IV Zithromax shortage. This should be adequately effective. Temperature is 100.6, respirations 22, O2 saturation is 99% on 2 L nasal cannula.

Problem #2:

Diabetes.

Subjective:

On Lantus 10 b.i.d.

Objective:

Blood sugar was 253 at 2215 yesterday.

Plan:

I will decide on dosage of insulin tomorrow after morning blood tests. Also we will get D-dimer to see if Lovenox indicated.

HCC LOMPOC, CA

HISTORY AND PHYSICAL EXAM

Physician: Lawrence Riemer, MD

History Of Present Illness:

The patient is a 48-year-old black male, USP inmate with hypertension, diabetes, who presented with one week of fever, cough, diarrhea, some nausea after exposure to COVID-19. He has a poor appetite. He was treated with albuterol with a little benefit. He had hypoxia with an O2 saturation of 84% prior to transfer from the prison. He was admitted to my service, diabetes said to be diet controlled.

Past Medical History:

Ankle problem with a gunshot wound to the left ankle. Prison says he has a history of noncompliance with medical treatment, also low back pain, unspecified disorder of patella, has had a nonspecific chest pain, said to have an adjustment disorder, radiculopathy, stage II kidney disease. He has had some dizziness and giddiness and spine disease, _____ disc.

Past medical history as above. Mental problems noted.

Medications:

Amlodipine 10 mg a day, Tylenol, albuterol inhaler HFA without benefit, aspirin 81 mg a day, atorvastatin 20 mg a day, doxazosin 1 mg at night, lisinopril 20 mg a day, metformin 500 mg b.i.d.

Physical Examination:

Revealed a man without severe shortness of breath, but with some temperature to 101.2 April 7th at 19:35, respirations 20 on 3 L of oxygen, O2 saturation 98%, blood pressure 145/94. Height 5 feet 6 inches, weight 188.3 kg.

HEENT: Eyes, without icterus. Nose, not congested. Hearing good. Has nasal cannula.

Lungs: With diffuse decreased breath sounds of moderate severity.

Heart: Regular without murmur or extra sound.

Neck: No neck vein distention. Carotid without bruits.

Abdomen: Only slightly tender.

Laboratory Data:

Chest x-ray, a mildly hazy infiltrate suspected in the peripheral aspects of both lower lungs primarily on the left. Suggestive to me of COVID-19.

WBC 12.9, hemoglobin 14.1, sodium 134, potassium 3.6, chloride 92, CO2 of 22, anion gap 24, BUN 21, creatinine 1.2, GFR over 60, glucose however 281, consistent with poor control of diabetes. Calcium 8.8, albumin 3.6, bilirubin 0.9, alkaline phosphatase 64, ALT 20, AST 29, total protein 7.4. Urinalysis ordered.

PROGRESS NOTE

Physician: Lawrence Riemer, MD

Date of Progress Note:

Problem:
COVID-19 suspected.

Subjective:
Diarrhea is a major problem. Some fatigue, shortness of breath, going to bathroom, taking off oxygen.

Objective:
Temperature 99, heart rate 82, O2 saturation 2 L, decreased to 1 L, 96 by nasal cannula, blood pressure 139/72. WBC 9.8, hemoglobin 13.1, D-dimer only 348. Therefore, we will not give Lovenox per March 11th lancet article from Chinese Cardiology experience. Sodium 136, potassium 3.8, chloride 97, CO2 of 26, anion gap 12, BUN 19, creatinine 1.0, glucose 259, magnesium 2.3. Cholesterol 97, triglycerides 112, HDL 27, LDL however on atorvastatin only 50. Hemoglobin A1c 11.9, poor long-term control. Urine specific gravity 1.028 this morning. Therefore, hemoconcentrated. Sputum Gram stain, 4+ epithelial. No bacterial growth yet. Many gram-positive cocci, gram-positive bacilli, moderate gram-negative bacilli, a few gram negative diplococci.

Plan:
A 1000 mL normal saline.

Final Report

Exam: FILM CXR

Chest PA and lateral views

INDICATION: No history available at this time

COMPARISON: No prior chest exams available. Thoracic spine exam 12/19/19

FINDINGS:

In the bilateral peripheral mid to lower lung field are patchy ill-defined alveolar opacities.

Low lung volumes are noted. Mild linear atelectasis bilateral midlung field.

Remaining lung fields are clear.

Redemonstration of retained bullet shrapnel fragment right posterior upper back soft tissues and some posterior to the right shoulder.

The cardiomedial silhouette is within normal limits. No pleural effusions. Bony elements are within normal limits for age. No acute osseous abnormality.

IMPRESSION:

1. In the bilateral peripheral mid to lower lung field are patchy ill-defined alveolar opacities. Multifocal pneumonia considered which could be on viral or bacterial etiology. Correlate with clinical findings.

2. Mild linear atelectasis bilateral midlung field.

3. Remaining lung fields are clear.

4. Redemonstration of retained bullet shrapnel fragment right posterior upper back soft tissues and some posterior to the right shoulder.

EXHIBIT B

From: [Eric Hammonds](#)
To: [Green, Thomas \(USACAN\)](#)
Subject: Defendant Marcus Belton (98903-011)
Date: Thursday, October 15, 2020 2:03:16 PM

Mr. Green,

You inquired as to whether it could be determined if Mr. Belton was told by Medical staff at FCI Lompoc that he would be "written up" or disciplined for seeking medical care or otherwise complaining about COVID-19 symptoms, as Mr. Belton appears to have made such allegation to Counsel. Due to the vagueness of the allegation regarding the staff members from whom the statement came, it is difficult to conduct a thorough review.

Nevertheless, I have searched defendant's electronic files where all reports, violations, written admonitions and adjudications regarding the same are maintained. There is no reference in defendant's file to defendant being written up, admonished or otherwise warned of any consequences on account of seeking medical treatment. On the contrary, patients may seek assistance from medical at any time by simply making a request. A review of Mr. Belton's medical records reveals he has received significant treatment from medical for various issues.

I have also reviewed the electronic administrative remedy file, which contains all grievances filed by inmates who may have any complaints about any condition of confinement, such as the provision of medical care or complaints about staff mistreatment. Although Mr. Belton filed 16 administrative remedies concerning a variety of grievances throughout his incarceration at Lompoc, which includes a prior complaint of staff misconduct and retaliation, there was no record of a grievance submitted alleging he would be written up or retaliated against for seeking medical care. Should Mr. Belton feel he was treated inappropriately by staff, he may file a request for administrative remedy consistent with the provisions of 28 C.F.R. 542, which, as in his past instances, would result in a formal review by institution staff and a written response.
